Hixburg

Hixburg, Va., Sept. 7.- Charlie Williams missed his guess. With a strip of land near the Appomattox River, on Jim Carson's farm that had been moist all the summer, Charlie had a fine garden. On a recent Saturday, Charlie gathered two bushels of butterbeans. He looked over the rows, and thought he could pick SIX more bushels on Monday. That was where he was wrong. By that time the ground hogs had feasted on the vines and trampled the beans.

Early each morning and before he got to Appomattox to work, and when he came home in the afternoon, Charlie watched for their return. Finally, he killed three.

It has been said that when one ground hog has been killed, the others, "put out the word," and no more return that season.

Boxwood Can Be Injured By Deep Cultivation

Boxwood, and other shallow-rooted plants, can be killed with kindness.

Horticulturists at VPI warn against deep cultivation of such plants as boxwood, roses, azaleas, rhododendron. Deep cultivation, they say, often cuts many feeder roots that are close to the surface, and exposes others to the sun. Use a mulch for these shallow - rooted plants and eliminate digging to control the weeds. Do not make the mulch over 2 inches thick. Making a cone of soil or mulch around the plants also can be injurious.

The horticulturists also remind home gardeners to add materials to the compost pile during the summer. Use grass clippings, garden plants, scraps of vegetables, or clippings from pruning. The materials in the compost pile are of little value until after they have rotted. To hasten rotting. The rotting is caused by the work of certain organisms which must have nitrogen, moisture, and air. To supply nitrogen and at the same time increase the food value of the compost, spread about 1 pint of garden fertilizer, 5-10-5, over each 6-inch layer where the compost is 10 feet long and 5 feet wide. Also scatter a handful of lime over each layer unless the compost is to be used for such acid soil plants as azaleas.
